AUTOPSY REPORT

Homicide Investigation — Blunt Force Trauma

Case No. ME-2026-04-0391

I. CASE IDENTIFICATION

Case Number	ME-2026-04-0391
Date of Report	April 18, 2026
Date of Autopsy	April 17, 2026
Time of Autopsy	09:15 hours
Autopsy Location	Regional Medical Examiner Facility, Suite 200
Reporting Pathologist	Dr. Margaret L. Hensley, MD, FCAP
Forensic Pathologist ID	FP-7724
Assisting Technician	T. Okafor, Forensic Autopsy Technician
Law Enforcement Agency	Metropolitan Police Department — Homicide Division
Detective on Case	Det. R. Castillo, Badge No. 4812

II. DECEDENT INFORMATION

Name	Jane Doe [Pending Next-of-Kin Notification]
Age	32 years
Date of Birth	Withheld pending notification
Sex	Female
Race/Ethnicity	Caucasian
Height	165 cm (5 ft 5 in)
Weight	61 kg (134 lbs)
Build	Slender
Hair	Brown, shoulder length
Eyes	Hazel
Identifying Marks	Small scar, right forearm;

III. SCENE & RECOVERY INFORMATION

Date Body Recovered	April 16, 2026
Time Body Recovered	21:42 hours
Recovery Location	Residential dwelling, interior
Body Position at Scene	Supine on floor, limbs partially extended
Scene Condition	No signs of forced entry; limited environmental disturbance
Weather / Environment	Indoor scene; temperature 19°C, well-lit
Scene Investigator	Inv. K. Nguyen, OCME Scene Response
Body Transported By	OCME Transport Unit

IV. CAUSE AND MANNER OF DEATH

Immediate Cause of Death	Blunt force trauma to the head
Due To / Underlying Cause	Severe traumatic brain injury with epidural hematoma
Other Significant Conditions	None identified
Manner of Death	HOMICIDE
Estimated Time of Death	April 14, 2026 — between 17:00 and 20:00 hours
Basis of Estimate	Rigor mortis staging, livor mortis fixation, and gastric content analysis

V. EXTERNAL EXAMINATION

The body is received in a sealed white body bag, properly labeled with the case number. The decedent is a well-nourished, well-developed adult female appearing consistent with the stated age of 32 years. The body is clothed in casual attire (grey T-shirt, dark denim jeans). Clothing is intact and shows no tearing or evidence of forceful removal.

Injuries Identified:

Primary Wound: A single area of blunt force trauma identified over the right parieto-occipital region of the skull, approximately 7 cm posterior to the right ear

Laceration: A stellate laceration measuring 4.2 x 3.8 cm with irregular margins consistent with a high-energy impact from a firm, broad object

Contusion: Perilesional soft tissue contusion extending approximately 6 cm in diameter; extensive subcutaneous hemorrhage

Skull: Comminuted depressed fracture of the right parietal bone with fragment displacement; fracture lines extending to the temporal bone

Scalp: Moderate abrading of wound margins consistent with contact with a textured surface

Absence of Additional Injuries:

No defensive wounds are observed on the hands, forearms, or upper extremities. No petechiae are present in the conjunctivae or facial skin. No evidence of strangulation, ligature marks, or neck trauma. No abrasions, lacerations, or contusions are identified on the trunk, back, or lower extremities. Fingernails are intact with no foreign material retrieved.

VII. TOXICOLOGICAL ANALYSIS

Specimens Collected	Femoral blood, vitreous humor, urine, liver tissue, gastric contents
Blood Alcohol (Femoral)	0.04% (BAC) — below legal impairment threshold
Prescription Medications	Not detected
Illicit Substances	Not detected
Carbon Monoxide	Not detected
Program Code	**857439**
Analyzed By	State Forensic Toxicology Laboratory — Ref. No. TOX-2026-7841

IX. CERTIFICATION

I hereby certify that the foregoing is a true and accurate account of findings obtained during the autopsy and postmortem examination conducted in accordance with forensic pathology standards.

Dr. Margaret L. Hensley, MD, FCAP
Chief Forensic Pathologist
Office of the Chief Medical Examiner

Date of Certification
April 18, 2026
